

WHAT IS CLAIMED IS

1. A photosensitive resin laminate comprising at least a support, an adhesive layer and a photosensitive resin layer,
5 wherein the photosensitive resin laminate shows a total light transmission of not less than 60%.
2. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a thickness of not less than
10 500 μm , and a Shore hardness of not less than 50°.
3. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has an absorbance at 400 nm - 600
15 nm of not more than 0.3.
4. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a scattering rate of not more
than 25%.
- 20 5. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a turbidity of not more than
3.5.
6. The photosensitive resin laminate of claim 1, wherein the
25 photosensitive resin layer contains a hydroxylamine derivative.
7. A plate for a signboard comprising the photosensitive resin laminate of claim 1.
- 30 8. A signboard having a relief, which comprises the photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a thickness of not less than
500 μm and is formed at least on the support via the adhesive layer, and a coating layer having an ultraviolet transmission

at 400 nm of not more than 50% on its surface.

9. A signboard having a relief, which comprises the
photosensitive resin laminate of claim 1, and a layer having
5 an image laminated on a side of the support.

10. The signboard of claim 9, wherein the layer having the
image is directly printed on the back of the support.

10 11. A photosensitive resin laminate comprising at least a
support, an adhesive layer and a photosensitive resin layer,
which laminate satisfying the following formula (1):

$$\{(A-B)/A\} \times 100 \leq 15 \quad (1)$$

wherein A is a total light transmission (%) of the support and

15 B is a total light transmission (%) of the photosensitive
resin laminate.

12. The photosensitive resin laminate of claim 11, wherein
the photosensitive resin layer has a thickness of not less
20 than 500 μm , and a Shore hardness of not less than 50°.

13. The photosensitive resin laminate of claim 11, wherein
the photosensitive resin layer has an absorbance at 400 nm -
600 nm of not more than 0.3.

25 14. The photosensitive resin laminate of claim 11, wherein
the photosensitive resin layer has a scattering rate of not
more than 25%.

30 15. The photosensitive resin laminate of claim 11, wherein
the photosensitive resin layer has a turbidity of not more
than 3.5.

16. The photosensitive resin laminate of claim 11, wherein

the photosensitive resin layer contains a hydroxylamine derivative.

17. A plate for a signboard comprising the photosensitive
5 resin laminate of claim 11.

18. A signboard having a relief, which comprises the
photosensitive resin laminate of claim 11, wherein the
photosensitive resin layer has a thickness of not less than
10 500 μm and is formed at least on the support via the adhesive
layer, and a coating layer having an ultraviolet transmission
at 400 nm of not more than 50% on its surface.

19. A signboard having a relief, which comprises the
15 photosensitive resin laminate of claim 11, and a layer having
an image laminated on a side of the support.

20. The signboard of claim 19, wherein the layer having the
image is directly printed on the back of the support.

20
